

Santa Fe™

MOISTURE CONTROL SOLUTIONS

Santa Fe hang kits can be used to suspend any horizontal Santa Fe dehumidifier in a crawl space, basement or attic setting. Hanging a Santa Fe dehumidifier provides protection from potential flooding in crawl space or basement applications, offers the ability to free up floor space, reduces possible vibration in an attic installation, and also provides additional height for proper condensate drainage / removal.

Santa Fe Hang Kits

- **Quick and easy installation** – Minimal parts
- **One person setup** (regardless of the dehumidifier), reducing labor costs and time
- Ability to **hang ANY horizontal Santa Fe** dehumidifier
- A solution that can be **used in crawlspaces, basements, attics and more.**
- **Adjustable, heavy duty ratchet straps** – each strap will hold up to 150 lbs each
